TITLE V MATERNAL & CHILD HEALTH SERVICES BLOCK GRANT
STATE PROFILE FOR FY 2009
[Sec. 506(A)(1)]
STATE: FL

1. State MCH Administration:
(max 2500 characters)

The Department of Health is the agency responsible for the administration of the Title V program in Florida. Maternal and child health responsibilities are divided between Family Health Services (pregnant women and children) and Children's Medical Services (children with special health care needs). The Department of Health administers health programs through its county health departments and Children's Medical Services offices. Healthy Start continues to be our priority maternal and child health initiative in Florida. Healthy Start is designed to ensure access to maternal and child health services to all women and children in Florida. Other efforts to improving maternal and child health include services to substance exposed newborns, Fetal and Infant Mortality Review projects, improving pregnancy outcomes, prenatal smoking cessation, and pregnancy associated mortality review. Services for children with special health care needs include the Early Intervention Program, high risk obstetrical satellite clinics, Regional Perinatal Intensive Care Centers and clinic-based medical and therapeutic care.

e. Others	<u> </u>

11. Statewide Initiatives and Partnerships:

a. Direct Medical Care and Enabling Services:
(max 2500 characters)

Children's Medical Services Integrated Service Delivery Network - A comprehensive continuum of medical and supporting services to eligible individuals with special health care needs. The system of care is a statewide integrated network of providers that includes local, regional and tertiary care facilities. Providers and families are supported through a case management system that includes nurse case managers, social workers and health care professionals. The service continuum includes prevention, early intervention, primary care and medical and therapeutic care. Child Health Services for Children under 1 - Child Health Services are provided mainly by the County Health Departments and include immunizations, periodic health history and physical examinations, laboratory screening tests for health indicators such as lead and anemia, developmental screening, risk assessment, parent education, accident prevention and substance abuse prevention education. Child Health is funded 100% by Title V.

b. Population-Based Services:
(max 2500 characters)

Pregnancy Associated Mortality Review (PAMR) project - a population-based surveillance and selective case review process that monitors trends in pregnancy associated deaths, and identifies gaps in care and systematic service delivery problems. Fetal and Infant Mortality Review (FIMR) Project - a community-based effort to provide quality improvement mechanisms that identify medical, psychosocial, environmental and structural factors that may contribute to fetal and infant deaths. Healthy Start Prenatal Screening - used to identify pregnant women who have an increased risk of pregnancy complications or poor birth outcomes due to environmental, medical, nutritional, or behavioral risk factors. Every pregnant woman is eligible for the screening process. Women at-risk may be eligible for care coordination and other services, based on need and local resources. Healthy Start Infant Screening - used to identify infants who are at increased risk of poor health or adverse development due to environmental, medical, nutritional, or behavioral risk factors. Every infant born in Florida is eligible for the screening process.

c. Infrastructure Building Services:
(max 2500 characters)

Healthy Start Coalitions - There are 32 Healthy Start Coalitions covering 66 of the 67 counties in Florida to ensure local leadership and planning for a system of care, to promote optimum health outcomes for pregnant women and infants. Additional capacity is provided through partnerships with the private sector, the public sector, state government, local government, community alliances, and maternal and child health care providers. Healthy Start Evaluation - The Healthy Start program includes an evaluation component of all Healthy Start services. This includes tracking the number of participants who receive Healthy Start services and comparing these numbers to indicators of improved pregnancy outcomes or infant developmental outcomes such as infant mortality, entry into prenatal care, and the number of sudden infant deaths.

1. Section Number: Performance Measure #11

Field Name: PM11

Row Name:

Column Name:

Year: 2007

Field Note:

The Department of Health does not track breastfeeding data in the general population. Prior to 2005, the Department reported Ross data (collected from the annual Infant Feeding Survey conducted by Ross Laboratories) for the percentage of mothers in Florida who were breastfeeding in the hospital. Beginning with the data for 2005, the Department began reporting Ross data for the percentage of mothers who were breastfeeding their infants at six months of age. The data source changed in 2006 when Ross Laboratories ceased to conduct their annual Infant Feeding Survey. At this time, the Department began using data provided by the Centers for Disease Control (CDC) which is obtained from the National Immunization Survey. The CDC data presents breastfeeding information according to the year of the child's birth. The data reflected in the chart above under 2007 is still information collected on children born in 2004 and obtained in interviews conducted through December 2006.

2. Section Number: Performance Measure #11

Field Name: PM11

Row Name:

Column Name:

Year: 2006

Field Note:

The Department of Health does not track breastfeeding data in the general population. The department has previously reported survey data from Ross Laboratories. Prior to 2005, the Department reported Ross data for the percentage of mothers in Florida who were breastfeeding in the hospital. In 2005, the Department began reporting Ross data for the percentage of mothers who were breastfeeding their infants at six months of age. However, Ross Laboratories has now ceased to conduct their Infant Feeding survey so data is no longer from this source. The Department will now begin to use indicator data provided by the CDC based on the National Immunization Survey. This data for 2005 is included. It is the latest data available.

Starting in 2004 trimester prenatal care began to be calculated as the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit. Prior to 2004 these data were obtained by direct question that noted the trimester the mother began prenatal care. Consequently these data are not comparable to data from prior years. Births with unknown information as to when prenatal care began are excluded from the denominator. Annual performance objectives have been lowered to accommodate the change in data collection.

Early Steps has changed the methodology used to calculate the annual indicators due to recent improvements in our data collection. Thus the numbers for 2004 (which is our 2003-2004 Fiscal Year) were updated with the new methodology. We now use an unduplicated count of Part C eligible children with at least one service provided as the numerator. For the denominator we use the Part C eligible children enrolled during the period. We continue to refine our data collection and expect to have improved data in the future.

2004 estimates include those that reported "quitting" on the birth certificate in the numerator. Analysis against PRAMS has demonstrated this quit group in not valid for use in program and policy decision making. Data for 2005 and later year estimates exclude unknowns for smoking status and quits from the numerator and denominator. This removes a demonstrated bias from reporting that existed previously (2004).

Field Note:
 Data for 2005 and 2006 are not yet available. The PPOR analysis uses birth record data linked to infant death data. Since infant death can occur up to 1 year from the date of birth, infant death data for a full year after the birth dates must be linked to the birth records. For births occurring in 2004, infant deaths occurring in 2004 and 2005 need to be linked to the births. Complete data for infant deaths occurring in 2006 will not be available until August of 2007 and plans are to have the linked file available in December 2007. The PPOR analysis for 2005 would be available by February 2008, and the PPOR analysis for 2006 would be available by February 2009.
 These data are revised for 2002 and 2003 due to changes in the definition of the comparison group. This was necessitated by changes in the 2004 birth record.

LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: FL FY: 2009

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. Improve preconceptional and interconceptional health and well-being.
2. Decrease racial disparities in maternal and child health outcomes.
3. Increase access to health care for the maternal and child health population, including children with special health care needs.
4. Decrease maternal, infant, and child morbidity.
5. Decrease maternal, infant, and child mortality.
6. Decrease risk factors associated with poor maternal and child health outcomes.
7. Decrease teen pregnancy.
8. Ensure consumer-friendly, culturally competent systems of care.
9. Increase statewide and local data and analysis capacity.
10. Increase awareness of public health preparedness issues unique to the maternal and child health population, including children with special health care needs.

STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET
STATE: FL

SP # 1

PERFORMANCE MEASURE:

The percentage of Part C eligible children receiving service

STATUS:

Active

GOAL

To increase the number of eligible children who receive a service.

DEFINITION

Numerator:

Number of eligible children who receive a service.

Denominator:

Number of children eligible.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

21.5 Clinical preventive services from publicly funded programs

DATA SOURCES AND DATA ISSUES

Department of Health data

SIGNIFICANCE

Increasing the percentage of Part C eligible children receiving a service has a positive effect on the outcome measures related to reducing infant, neonatal, postneonatal and perinatal morbidity.

SP # 2

PERFORMANCE MEASURE:

The percentage of subsequent births to teens age 15 to 19

STATUS:

Active

GOAL

To lower the percentage of subsequent births to teens age 15 to 19.

DEFINITION

Numerator:

Numerator: Number of females under 19 with a second or higher order birth in the last five years.

Denominator:

Denominator: Number of live births to females age 15-19 in the calendar year.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

Objective 5.1

Reduce repeat births among females age 15-19.

DATA SOURCES AND DATA ISSUES

Vital records are the source of data on mother's age and births. Population numbers are determined from Vital Statistics records of teens with a second or higher order birth.

SIGNIFICANCE

DHHS made teen pregnancies a priority goal (a major threat to healthy and productive lives) in their 1997 strategic plan. A second teen birth is associated with the lack of high school completion, inability to work, solidifying the cycle of poverty for young mothers, and creating welfare dependency.

SP # 3

PERFORMANCE MEASURE:

The percentage of women reporting tobacco use during pregnancy

STATUS:

Active

GOAL

To decrease the percentage of women who report tobacco use during pregnancy on the certificate of live birth.

DEFINITION

Numerator:

Number of women who report tobacco use on the certificate of live birth.

Denominator:

Number of births in Florida.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

3.7 Smoking cessation during pregnancy

Increase smoking cessation during pregnancy so that at least 60 percent of women who are cigarette smokers at the time they become pregnant quit smoking early in pregnancy and maintain abstinence for the remainder of their pregnancy.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. The data is taken directly from the Certificate of Live Birth data.

SIGNIFICANCE

Reducing tobacco use during pregnancy has a positive effect on reducing the infant, neonatal, postneonatal and perinatal mortality rates and on lowering the number of low birth weight deliveries..

SP # 4

PERFORMANCE MEASURE:

The percentage of low-income children who access dental care

STATUS:

Active

GOAL

To increase access to dental services for low-income children in order to provide clinical preventive and treatment services needed to improve and maintain oral health.

DEFINITION

Numerator:

Number of children who receive services through Medicaid providers, county health departments and community health centers.

Denominator:

The number of low-income children below 200% of the federal poverty level.

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

13.2 Untreated dental caries

Reduce untreated dental disease to no more than 20 percent among children 6 through 8 and no more than 15 percent among adolescents age 15.

DATA SOURCES AND DATA ISSUES

Data are compiled from annual ad hoc reports provided by the Medicaid program, from county health department data maintained by the Public Health Dental Program, and community health center data extracted from the annual Uniform Data System report.

SIGNIFICANCE

Low-income children are at high risk for dental disease because of the lack of access to professional care. Dental caries is the most common chronic disease of children, but amenable to early intervention. Early dental disease can be reversed and more advanced disease can be treated before it progresses to pain, infection and the need for more expensive intervention.

SP # 5

PERFORMANCE MEASURE:

The percentage of pregnant women screened by Healthy Start

STATUS:

Active

GOAL

To achieve universal screening that will identify pregnant women who are at increased risk for preterm delivery or who are at increased risk for delivering a low birth weight infant.

DEFINITION

Numerator:

Number of screens completed

Denominator:

Number of births for same time period

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

14.5 Low birth weight

Reduce low birth weight to an incidence of no more than 5 percent of live births and very low birth weight to no more than 1 percent of live births.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. In previous years, objectives related to Healthy Start prenatal screening rates have been measured by the percent of women offered the screening. Recent data analysis has focused instead on the number/percent of women actually screened. This number is generated by using the number of births for the same time period as the denominator. This results in a much lower rate, but ultimately the one that shows participation in prenatal risk screening. This denominator used is a proxy for the estimated number of pregnant women because in Florida there is not a data system that captures the actual number of pregnant women. Thus, although this is an imperfect measure, used over time it should provide an indication of improvement or lack of improvement of the prenatal screening rates.

SIGNIFICANCE

The ability to identify high risk pregnant women is critical to the ability to assess and provide interventions to address the identified risk factors and improve pregnancy outcomes. Additionally, the data collected through the prenatal screening process enables the statewide analyses of risk factors for pregnant women in Florida.

SP # 6

PERFORMANCE MEASURE:

The percentage of infants screened by Healthy Start

STATUS:

Active

GOAL

To achieve universal screening that will identify infants who are at increased risk for post-neonatal death.

DEFINITION

Numerator:

Number of screens completed

Denominator:

Number of births for same time period

Units: 100 **Text:** percent

HEALTHY PEOPLE 2010 OBJECTIVE

14.1 Infant mortality

Reduce the infant mortality rate to no more than 7 per 1,000 live births.

DATA SOURCES AND DATA ISSUES

The data source is the Florida Department of Health, Vital Statistics Office. The data for the infant screen is taken directly from the Certificate of Live Birth.

SIGNIFICANCE

The ability to identify high-risk infants is critical to the ability to assess and provide interventions to address the identified risk factors and improve outcomes during the first year of life. Additionally, the data collected through the infant screening process enables the statewide analyses of risk factors for infants in Florida.

SP # 7

PERFORMANCE MEASURE:

The rate per 1,000 of hospital discharges due to asthma in children 0-14

STATUS:

Active

GOAL

To reduce the number of hospitalizations due to asthma in children age 0-14.

DEFINITION

Numerator:

Number of hospital discharges due to asthma in children age 0-14

Denominator:

Total population of children age 0-14

Units: 1000 **Text:** 2

HEALTHY PEOPLE 2010 OBJECTIVE

11.1 Asthma hospitalizations

Reduce asthma morbidity among children, as measured by a reduction in asthma hospitalizations to no more than 225 per 100,000 people.

DATA SOURCES AND DATA ISSUES

Hospital discharge data

SIGNIFICANCE

Asthma affects over 100 million people worldwide and creates a burden in health care costs, lost productivity, increased absenteeism from school, and reduced participation in family life. Asthma prevalence is increasing most rapidly among children, especially where urbanization is taking place. Effective asthma management and prevention can prevent costly hospitalizations, and decrease school and work absenteeism.

SP # 8

PERFORMANCE MEASURE:

Excess feto-infant mortality attributed to the maternal health/prematurity category in the PPOR statewide analysis.

STATUS:

Active

GOAL

To decrease the excess feto-infant death attributable to maternal health/prematurity.

DEFINITION

Using the Perinatal Periods of Risk Analysis, when compared to a statewide reference group, the excess fetal deaths with gestational ages 24 weeks or greater and fetal and infant deaths with birth weights of 500 grams or greater that are attributable to the maternal health/prematurity category. Units: Difference in excess feto-infant mortality between reference group and non-reference group.

Numerator:

Denominator:

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2010 OBJECTIVE

Objective 16-1a

Fetal deaths at 20 or more weeks of gestation (Baseline 6.8 in 1997)

Objective 16-1b

Fetal and infant deaths during perinatal period (28 weeks of gestation to 7 days or more after birth) (Baseline 7.5 in 1997)

DATA SOURCES AND DATA ISSUES

Birth records matched to infant death records and fetal death records.

SIGNIFICANCE

Recent perinatal periods of risk analysis have indicated that there is substantial opportunity for improvement in the area of maternal health and prematurity. Preconceptional and interconceptional care for women may result in lower excess rates of feto-infant death attributable to this category.

HEALTH SYSTEMS CAPACITY MEASURE # 01

The rate of children hospitalized for asthma (ICD-9 Codes: 493.0 -493.9) per 10,000 children less than five years of age.

	Annual Indicator Data				
	2003	2004	2005	2006	2007
Annual Indicator	<u>62.9</u>	<u>54.9</u>	<u>40.9</u>	<u>37.1</u>	<u>32.3</u>
Numerator	<u>6,417</u>	<u>5,789</u>	<u>5,307</u>	<u>4,910</u>	<u>4,344</u>
Denominator	<u>1,019,790</u>	<u>1,054,829</u>	<u>1,298,296</u>	<u>1,323,696</u>	<u>1,343,980</u>

Check this box if you cannot report the numerator because
1. There are fewer than 5 events over the last year, and
2. The average number of events over the last 3 years is fewer
than 5 and therefore a 3-year moving average cannot be
applied.

- Section Number:** Health Systems Capacity Indicator #02

Field Name: HSC02

Row Name:

Column Name:

Year: 2006

Field Note:

For 2006, the actual number for this indicator is 107.8 percent and the actual numerator is 150,503, as reported by AHCA. The reason for the >100 percent participation ratio is due the fact that the # of eligible were based on their age as of 09/30/06. But, they count the eligible who had a CHCUP based on their age at the time of the CHCUP.

Field Name: HSC02

Row Name:

Column Name:

Year: 2005

Field Note:

FY2005 data for indicator and denominator are estimated. Actual number of Medicaid enrollees is an estimate, derived by using actual number of infants screened and assuming rate stayed the same as last year.

HEALTH SYSTEMS CAPACITY MEASURE # 03

The percent State Childrens Health Insurance Program (SCHIP) enrollees whose age is less than one year during the reporting year who received at least one periodic screen.

Column Name:

Year: 2005

Field Note:

Starting in 2004, trimester prenatal care began is calculated as the time elapsed from the date of the last menstrual period to the date of the first prenatal care visit. Prior to 2004, these data were obtained by direct question that noted the trimester the mother began prenatal care. Consequently, these data are not comparable to data from prior years.

HEALTH SYSTEMS CAPACITY MEASURE # 07A

- 1. **Section Number:** Health Systems Capacity Indicator #07B

Field Name: HSC07B

Row Name:

Column Name:

Year: 2005

Field Note:

A significant increase is noted in the percentage of those receiving dental services in FY 2005. This increase is due to a notable decrease in the number of EPSDT eligible children aged six through nine years of age. That number though is questionable although the data were received from Medicaid's fiscal agent. The Public Health Dental Program is asking for verification of those numbers from the Medicaid Program's data section. Therefore, until we are certain we have accurate data the number of EPSDT eligible children, the data for FY 2005 remains provisional.

HEALTH SYSTEMS CAPACITY MEASURE # 08

The percent of State SSI beneficiaries less than 16 years old receiving rehabilitative services from the State Children with Special Health Care Needs (CSHCN) Program.

FIELD LEVEL NOTES

1. **Section Number:** Indicator 06 - SCHIP
Field Name: SCHIP_Infant
Row Name: Infants
Column Name:
Year: 2009
Field Note:
In Florida, Medicaid covers infants up to 200 percent of poverty.
2. **Section Number:** Indicator 06 - SCHIP
Field Name: SCHIP_Women
Row Name: Pregnant Women
Column Name:
Year: 2009
Field Note:
In Florida, pregnant women are not eligible for SCHIP coverage.
3. **Section Number:** Indicator 05
Field Name: InfantDeath
Row Name: Infant deaths per 1,000 live births
Column Name:
Year: 2009
Field Note:
Infant Mortality Rate (IMR) as reported in the Florida Medicaid Maternal and Child Health Status Indicators Report 2002-2006 is the number of infants per 1,000 live births who die within one year of birth. This method provides an estimate of mortality risk for the 2006 birth cohort in which individuals may die during 2006 or 2007. This IMR differs from that reported by the Florida Department of Health (DOH) because DOH refers to all deaths occurring within a calendar year to children under one year of age regardless of the year the child was born. Also, the Indicators Report uses preliminary vital statistics data, whereas DOH uses a final dataset.
4. **Section Number:** Indicator 05
Field Name: CareFirstTrimester
Row Name: Percent of infants born to pregnant women receiving prenatal care beginning in the first trimester
Column Name:
Year: 2009
Field Note:
First trimester entry into prenatal care is a combination of new and old birth certificate elements. Only 1% of values were missing from the old birth certificate, while 11.8% of values were missing from the new birth certificate in 2004. Similarly in 2005, 11.0% of values were missing and 9.3% of values were missing in 2006. These missing values are partially responsible for the decrease in the rate of first trimester entry into prenatal care. Furthermore, total deliveries is usually the denominator used for each Indicator table. However, total deliveries includes women whose date of entry into prenatal care was not known. Since calculation of first trimester entry into prenatal care was calculated starting in year 2004 using information only on women for whom entry into prenatal care was known, total deliveries is not an appropriate denominator for this Indicator. The denominator for first trimester entry into prenatal care deletes 20,888 women from total deliveries in 2004, 24,308 women from total deliveries in 2005, and 21,665 women from total deliveries in 2006 for whom data on first trimester entry into prenatal care was unknown.
5. **Section Number:** Indicator 05
Field Name: AdequateCare
Row Name: Percent of pregnant women with adequate prenatal care
Column Name:
Year: 2009
Field Note:
Data for "all" column differ from numbers reported elsewhere in report, as this data comes from a different source. Source for this data looks at matched data files that exclude those without an SSN number. In the case of multiple births, multiple births are counted as one delivery, further skewing the results. Data for this indicator is more accurately reflected on Form 17.

 1. There are fewer than 5 events over the last year, and
 2. The average number of events over the last 3 years is fewer than 5 and therefore a 3-year moving average cannot be applied.

FORM NOTES FOR FORM 21

When an estimate cannot be provided for a specific race category, then the overall value for all races is used. In the case of counts, the estimated numbers based on the overall value is subtracted from the "Other and Unknown" column value.

FIELD LEVEL NOTES

- 1. Section Number:** Indicator 06A
Field Name: S06_Race_Infants
Row Name: Infants 0 to 1
Column Name:
Year: 2009
Field Note:
Florida does not gather data on race other than White, Black, and Other. Estimates for other racial groups are based on proportion of 2006 deliveries in that racial group, applied to the total in Row1 Column1, and deducted from Other and Unknown. In the event that the numbers in the estimated racial groups total to more than the Other and Unknown column, then they proportionately adjusted to equal the Other and Unknown Column and this column then becomes zero.
- 2. Section Number:** Indicator 06A
Field Name: S06_Race_Children1to4
Row Name: children 1 through 4
Column Name:
Year: 2009
Field Note:
The American Community Survey only provides estimates for age 0-4, and so the proportions within this age range are applied here using the same proportion as "Total All Races."
- 3. Section Number:** Indicator 09A
Field Name: HSIRace_Children
Row Name: All children 0 through 19
Column Name:
Year: 2009
Field Note:
"All", "White", and "Black" estimates come from 2006 Florida CHARTS population projections. Estimates for the total number in the other racial and ethnic groups come from the 2005 American Community Survey. This total number is then converted to a percentage of the total Florida 0-19 year old population using the 2005 American Community Survey. This proportion is then applied to the "Total All Races" in Column 1, Row 1 of this form, and the resulting number deducted from the "Other and unknown" in Column 9, Row 1 and placed in the proper race column of Row 1. When the total from the American Community Survey generated estimates is greater than the "Other and unknown" in Column 9, Row 1, then a "0" is placed in this cell, and the American Community Survey generated estimates are recalculated in proportion to the "Other and unknown" total.
- 4. Section Number:** Indicator 09A
Field Name: HSIRace_SingleParentPercent
Row Name: Percent in household headed by single parent
Column Name:
Year: 2009
Field Note:
Estimated based on the 2006 American Community Survey. Percent of children under 18 living in single-parent female household: The number of race or ethnicity category households multiplied by the percentage of female/male only households, where there is no husband/wife, but there is a child <18 years that is her/his own; divided by the total number of children in race or ethnic category.
- 5. Section Number:** Indicator 09A
Field Name: HSIRace_TANFPercent
Row Name: Percent in TANF (Grant) families
Column Name:
Year: 2009
Field Note:
The source for this data includes Hispanic as a race. To estimate counts that would include Hispanic ethnicity in the race categories, The Florida Department of Health, Office of Planning, Evaluation, and Data Analysis provided projections for the 2006 population of 0-19 year olds by race-ethnicity. The proportion of Hispanics was calculated by race from the Office of Planning, Evaluation, and Data Analysis projections. These proportions were then applied to the count of Hispanics provided by the data source. These values were then added to the appropriate race category above to attain a total under each race category that included Hispanic ethnicity. Finally, this count value was used to calculate column percentages. For 2006, the projected percentage of Hispanics that were White was 94.34%; the percentage of Hispanics that were Black was 4.32%; and the percentage of Hispanics that were Other was 1.34%.

Total TANF participants in 2007 was 62,838.
- 6. Section Number:** Indicator 09A
