Field Name: StateMCHFundsExpended
Row Name: State Funds
Column Name: Expended
Year: 2007
Field Note:
The major reason for the apparent reduction of state matching and other funds is the decision by the department to seek Medicaid Administrative Claiming (MAC) funds. To be eligible for MAC funding the salaries of the persons participating in the time study must be supported by funds which are not used to match other federal funds. Therefore the department decided to use some funds previously dedicated to MCH activities to attach the MAC funds. The staff still support BG activities, but these expenditures are reported on line 5 "Other Funds" not on line 3 as state match.

It should be noted that in FFY 08 the Ohio department of Health recieved approval of its' MAC plan and the first reimbursement under the plan.

Field Note:

The major reason for the difference is based on the department's decision to seek Medicaid Administrative Claiming funds (MAC). To be eligible for MAC funding, at least a portion of the the salaries of staff participating in the time study must be supported by funds which are not used to match other federal funds. Therefore the department decided to use some funds previously dedciated to MCH partnership to attract MAC funds. The staff still support MCH-BG activities, but these expenditures are reported as being related (i.e., as match or other) to the BG's budget.

Column Name: Expended
Year: 2007
Field Note:
1) The reduced direct care expenditures reflect the continuing implementation of cost reductions in the CSHCN program. These reductions were necessary because the program's resources, at the time, were not adequate to support the increasing costs.

2)The department's decision to seek Medicaid Administrative Claiming funds (MAC). To be eligible for MAC funding, at least a portion of the the salaries of staff participating in the time study must be supported by funds which are not used to match other federal funds. Therefore the department decided to use some funds previously dedicated to MCH partnership to attract MAC funds. The staff still support MCH-BG activities, but these expenditures are reported as being related (i.e., as match or other) to the BG's budget.

Numbers served are an estimated, unduplicated figure derived from the program serving the largest numbers of children in the age group: School Nurse Consultation.

There are slightly over 2,000,000 students in Ohio, public and private schools combined. While 85 percent have access to some school nursing service, Ohio's Title V school nursing consultation program receives even more calls from schools without a school nurse. All are counted as being served by a school nurse. 320,000 of the 2 million children are identified as being disabled and are counted in the CSHCN section of this form. Ohio also serves an additional 169,900 children ages 1-5 years in the WIC program. Note that this is a considerable increase from the previous year because school children receiving school nurse services were not included in the total then..

Year: 2007
Field Note:
The total number of calls includes 10,857 BCMH transfers, so there was a reduction of approximately 9,000 calls from the previous year. The reason is assumed to be due to a decrease in advertising for the helpline. Some state and local programs have stopped putting the MCH Helpline number on their materials because they have created their own Hotlines/Helplines. BCMH, which puts the MCH Helpline number on all materials, did not see a drop in calls.

PERFORMANCE MEASURE # 01

The percent of screen positive newborns who received timely follow up to definitive diagnosis and clinical management for condition(s) mandated by their State-sponsored newborn screening programs.

	Annual Objective and Performance Data				
	2003	2004	2005	2006	2007
Annual Performance Objective	100	100	100	100	100
Annual Indicator	97.3	78.6	96.2	66.3	66.3
Numerator	144	147	179	4,679	4,679
Denominator	148	187	186	7,052	7,052

Check this box if you cannot report the numerator because
 1. There are fewer than 5 events over the last year, and
 2. The average number of events over the last 3 years is fewer than 5 and therefore a 3-year moving average cannot be applied.

(Explain data in a year note. See Guidance, Appendix IX.)

Row Name:
Column Name:
Year: 2006
Field Note:

ODH Newborn Screening Lab does not collect treatment/clinical management information. Currently, ODH Genetics and Sickle Cell programs collect de-identified data. This will change in future years. Given protocol at the Lab, we assume all cases except hemoglobin traits receive confirmation, although Sickle Cell Traits do not require clinical management.

3. **Section Number:** Performance Measure #1
Field Name: PM01

Row Name:
Column Name:
Year: 2005
Field Note:

Data Source: ODH Newborn Screening Laboratory, 2005.

The laboratory does not routinely collect treatment data. There is no field in the laboratory database to enter the information. Any treatment information that comes in with the diagnostic information is entered into a comment field and cannot be easily recovered by queries. Therefore, these are estimated figures.

Beginning in July 2007, newborn screening treatment information will be collected through the ODH Genetics Program

PERFORMANCE MEASURE # 02

The percent of children with special health care needs age 0 to 18 years whose families partner in decision making at all levels and are satisfied with the services they receive. (CSHCN survey)

Field Name: PM11
Row Name:
Column Name:
Year: 2006
Field Note:
 Data Source:
 Numerator: CDC National Immunization Survey percentages for birth year 2005. were multiplied by the total number of Ohio resident Tbirths for 2005. he actual indicator is 33.3 +/-5.9
 Denominator: 2005 OH resident births, Vital Statistics data.

 These 2005 data were used as an estimate for both 2006 and 2007. CDC's data for birth year 2006 will not be available until August 2009.

 Ohio is reporting information for NPM 11 using data from CDC's National Immunization Survey (NIS). For this reporting deadline, we are only reporting for children born in 2004/5. An explanation follows:

 Ohio has decided to use the NIS as the data source to track progress on NPM 11. Ohio has access to Ross Mother's survey data, but this data will not not be used for reporting purposes.

 As of 2007, the CDC has begun releasing breastfeeding information from the NIS by birth year rather than by survey year. Subsequently, there is about a 3-year lag from birth year to year of reporting. In summer of 2007, CDC released data for children born in 2004.

 NOTE: 2005 data are the same as those reported for 2006 (the data reported in the table have been updated.).

Ohio – Children Ages Birth Through 17 Years
 Year 2004 2005 Two-Year Average
 Uninsured 222,344 217,668 220,006
 Insured 2,584,016 2,506,419 2,545,218
 Total
 Population 2,806,361 2,724,087 2,765,224

In order to be consistent with ODH's past practices, the numerator for this year's application calculation should be the two-year average, or 220,006 and the denominator should be 2,765,224. This results in an Annual Indicator of 8.0%.

This is a process measure; progress for this process measure is based on a scoring system that quantifies the degree to which expected proportions of children in defined age-and risk categories were screened for three health disorders: lead, vision, and hearing. During the reporting year, the committee working on this measure decided that the issues to be addressed with this measure were primarily capacity-building. Thus a new set of measures in the form of benchmarks (See Detail Sheet) were identified and progress toward them will be reported in the Annual Report for FFY 2007.

FORM 14
LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: OH FY: 2009

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. Incorporate racial/ethnic/cultural health equity in all activities.
2. Improve birth outcomes.
3. Assure appropriate screening, identification, intervention, care coordination and quality medical homes.
4. Assure access to comprehensive preventive and treatment services for individuals and families, including children with special health care needs.

STATE PERFORMANCE AND OUTCOME MEASURE DETAIL SHEET
STATE: OH

SP # 1

PERFORMANCE MEASURE:	Increase statewide capacity to reduce unintended pregnancies among populations at high risk for poor birth outcomes.
STATUS:	Active
GOAL	Reduce the number of unintended (mistimed and unwanted) pregnancies
DEFINITION	<p>The number of performance measure benchmarks Ohio has reached towards increasing statewide capacity to reduce unintended pregnancies among populations at high risk for poor birth outcomes.</p> <p>Numerator: Benchmarks: 1) Identify baseline rates of unintended pregnancy in Ohio. 2) Identify populations and areas at risk for poor birth outcomes. 3) Identify and apply appropriate evidenced-based practice standards and interventions for the target population. 4) Implement a Family Planning Medicaid Waiver.</p> <p>Denominator: Total number of benchmarks (4)</p> <p>Units: 4 Text: Scale</p>
HEALTHY PEOPLE 2010 OBJECTIVE	<p>9-1 Increase the proportion of pregnancies that are intended to 70%</p>
DATA SOURCES AND DATA ISSUES	PRAMS and Ohio Vital Statistics fetal death and abortion data files. This estimate assumes all abortions are the result of unintended pregnancy and that the proportion of fetal deaths which are unintended is the same as the proportion of live births. A small percentage of abortions will be due to fetal or maternal condition and not the result of an unintended pregnancy. Populations at risk for poor birth outcomes identified through Ohio Vital Statistics and PRAMS data.
SIGNIFICANCE	Poor birth outcomes are more common among black women, those with less than 12 years of education, unmarried women and those under age 20. Unintended pregnancy is also more common among these women. While unintended pregnancy by itself does not help us predict which babies are more likely to have poor birth outcomes, unintended pregnancy is associated with many risk factors for poor outcomes in families, both at birth and beyond. Unintended pregnancy is correlated with late or inadequate prenatal care, poor maternal nutrition, domestic violence, child abuse, and exposure of the fetus to harmful substances like tobacco, alcohol, and other drugs. It is associated with social and economic co-factors such as economic hardship, marital dissolution, failure to achieve educational goals, and spousal abuse.

SP # 2

PERFORMANCE MEASURE:

Percent of low birth weight black births among all live black births.

STATUS:

Active

GOAL

To reduce the percent of LBW black births among all live black births.

DEFINITION

Percent of LBW live births among live black births.

Numerator:

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

16-10
Low Birth Weight and Very Low Birth Weight

DATA SOURCES AND DATA ISSUES

Vital Statistics

SIGNIFICANCE

Black women in Ohio are more likely than white women to deliver a LBW infant (7.3% vs. 13.9% in 2002). Eliminating racial disparities in infant mortality will require a focus on reducing LBW and VLBW through the implementation of strategies aimed at improving the quality of prenatal care, identifying underlying medical conditions, and understanding the role social supports and environmental factors, such as stress, contribute to poor birth outcomes. While Ohio has a safety net system of health care for uninsured/underinsured and Medicaid consumers, significant barriers to pregnant women and children accessing those services remain. The OIMRI Program addresses the barriers (e.g., financial, geographic, cultural) that women and children experience and improves their access to and utilization of health care.

PERFORMANCE MEASURE:

Increase the capacity of the State to assess social/emotional health needs of MCH populations and to promote early identification, prevention and intervention services.

STATUS:

Active

GOAL

To ensure the social/emotional health needs of MCH populations are met.

DEFINITION

The percent of performance measure benchmarks Ohio has reached towards increasing the capacity of the State to assess social/emotional health needs of MCH populations and to promote early identification, prevention and intervention services

Numerator:

The number of performance measure benchmarks Ohio has reached towards increasing the capacity of the State to assess social/emotional health needs of MCH populations and to promote early identification, prevention and intervention services. Benchmarks: 1. Assess the social/emotional health needs of MCH populations. 2. Develop mechanisms to promote early identification of social/emotional health needs of MCH populations. 3. Develop prevention services for MCH populations at risk. 4. Increase providers in intervention service network.

HEALTHY PEOPLE 2010 OBJECTIVE

18-6 (Developmental)

Increase the number of persons seen in primary health care who receive mental health screening and assessment.

DATA SOURCES AND DATA ISSUES

While this is a capacity measure, there will be two major data-related focus areas: 1. Currently there is a lack of Ohio-specific data regarding the level of need for mental health services and social/emotional health services for MCH populations. Therefore, work on this performance measure will require increasing MCH's assessment capacity to identify the level of need. 2. Data exist in other state agencies regarding the availability and usage of publicly funded mental health services. MCH's activities will include development of a plan to collect and analyze secondary data which may include Ohio Department of Job and Family Services Medicaid data and Ohio Department of Mental Health data.

SIGNIFICANCE

Mental health is a state of successful performance of mental function, resulting in productive activities, fulfilling relationships with other people, and the ability to adapt to change and to cope with adversity. Mental health is indispensable to personal well-being, family and interpersonal relationships, and contribution to community or society. Mental disorders occur across the lifespan, affecting persons of all racial and ethnic groups, both genders, and all educational and socioeconomic groups. In the United States approximately 40 million people aged 18 to 64 years, or 22 percent of the population, had a diagnosis of mental disorder alone (19 percent) or of a co-occurring mental and addictive disorder in the past year. At least one in five children and adolescents between age 9 and 17 years has a diagnosable mental disorder in a given year. Mental and behavioral disorders and serious emotional disturbances in children and adolescents can lead to school failure, alcohol or illicit drug use, violence, or suicide. About 5 percent of children and adolescents are extremely impaired by mental, behavioral, and emotional disorders.

PERFORMANCE MEASURE:

Degree to which Division of Family and Community Health Services programs can incorporate and evaluate culturally appropriate activities and interventions

STATUS:

Active

GOAL

To eliminate health disparities among different racial/ethnic/cultural subgroups of populations served through the Division of Family and Community Health Services.

DEFINITION

The percent of performance measure benchmarks Division of Family and Community Health Services programs have reached towards incorporating culturally appropriate activities and interventions.

Numerator:

The number of performance measure benchmarks Division of Family and Community Health Services programs have reached towards incorporating culturally appropriate activities and interventions. Benchmarks: 1)Programs describe the racial, ethnic, and cultural makeup of MCH populations served and underserved. 2)Programs describe culturally appropriate activities they are undertaking to address racial, ethnic, and cultural disparities. 3)Assess existing tools used for cultural competence. 4.Assess existing and needed partnerships. 5)Programs identify best/promising practices and work with agencies to assist them to incorporate culturally appropriate activities and interventions

Goal 2

Eliminate Health Disparities The second goal of Healthy People 2010 is to eliminate health disparities among different segments of the population.

DATA SOURCES AND DATA ISSUES

Data from all Division of Family and Community Health Services programs

SIGNIFICANCE

This measure relates directly to the State priority on incorporating racial/ethnic/cultural health equity in all activities. Eliminating health disparities between different racial/ethnic/cultural subgroups is a national priority. Disparities are evident and persistent in all subpopulations served through Division of Family and Community Health Services programs, from the preconceptional period on. The elimination of health disparities for all people requires changing the way health care is delivered. A fundamental change from a provider-oriented to a patient-oriented system of care is necessary. Such a change will focus on preventive health care needs. To work effectively, health care providers need to understand the differences in how various populations perceive health and illness and treatment services. These factors affect whether people seek health care, how they describe their symptoms, the duration of care, and the outcomes of the care received.

SP # 5

PERFORMANCE MEASURE:

Percent of 3rd graders who are overweight

STATUS:

GOAL

To reduce the percentage of children who are overweight or at risk for overweight.

DEFINITION

Percentage of third graders in public schools in Ohio who are overweight or at risk for overweight. Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

19-3c

Reduce the proportion of children and adolescents who are overweight or obese to 5%.

DATA SOURCES AND DATA ISSUES

The Bureau of Oral Health Services conducts periodic statewide open-mouth examination surveys. The Bureau of Community Health Services and Systems Development has partnered in this effort to include height and weight measurements. A cadre of sentinel schools is then selected for annual screenings to serve as an indicator of oral health status. A county-level stratified cluster sample survey of third grade children in 370 Ohio public schools were selected using probability proportional-to-size methodology. The county-level data were aggregated for state estimates. Third graders will be weighed and measured periodically, similar to the oral health survey. Following one large statewide survey of 3rd graders which will establish a baseline, each year a cadre of sentinel schools will be selected for annual screenings to serve as an indicator of weight status.

SIGNIFICANCE

This performance measure is directly related to the "nutrition and physical activity" priority need. Maintenance of healthy weight is a major goal to reduce the burden of illness and its consequent reduction in quality of life and life expectancy. Patterns of healthful eating behavior need to begin in childhood and be maintained throughout adulthood. There is much concern about the increasing prevalence of overweight in children and adolescents. Childhood overweight is associated with adverse medical and psycho-social consequences including type 2 diabetes. Overweight acquired during childhood or adolescence may persist into adulthood and increase the risk for some chronic diseases later in life. Furthermore children from economically deprived circumstances are more likely to become overweight. As a result, the rising prevalence of overweight and chronic disease will place more burdens on the health care system, including increased costs of medical care. The prevalence of overweight in children and adolescents may be increasing in Ohio, but definitive data are lacking. Ohio currently has no population-based data on childhood overweight except for the self reports of Ohio's teens from the Ohio Youth Risk Behavior Survey. There is a commitment to establishing a baseline to assess the extent of childhood overweight in Ohio so that a strategic plan can be developed to reduce its prevalence.

PERFORMANCE MEASURE:

Assess the contribution of safety net providers in meeting the need for primary care, mental health, and dental services

STATUS:

Active

GOAL

To assure a system of care for the MCH population (mothers and infants; children; and children with special health care needs) who otherwise lack access to care.

DEFINITION

The percent of performance measure benchmarks Ohio has reached towards increasing the capacity of the State to assess the extent to which primary care is available to the MCH population; an analysis of gaps; and the development of a plan to identify and promote strategies to meet identified need. Benchmarks: 1. Method is developed to measure access to care. 2. Uniform data system is developed to measure services provided by safety net providers. 3. Periodic updates are provided describing the contributions of safety net providers in meeting unmet needs for primary care, dental and mental health services.

1-4
Increase the proportion of persons who have a specific source of ongoing care

DATA SOURCES AND DATA ISSUES

Ohio Family Health Survey Medicaid Enrollment and Utilization Data DFCHS, BCHSSD Statewide Analysis of Unmet Need,

SIGNIFICANCE

Improving primary care across the Nation depends in part on ensuring that people have a usual source of care. Having a primary care provider as the usual source of care is especially important because of the beneficial attributes of primary care. These benefits include the provision of integrated, accessible health care services by clinicians who are accountable for addressing a large majority of personal health care needs, developing a sustained partnership with patients, and practicing in the context of family and community. Increasing the number and proportion of members of underrepresented racial and ethnic groups who are primary care providers also is important because they are more likely to practice in areas where health services are in short supply and in areas with high percentages of underrepresented racial and ethnic populations. Financial, structural, and personal barriers can limit access to health care. Financial barriers include not having health insurance, not having enough health insurance to cover needed services, or not having the financial capacity to cover services outside a health plan or insurance program. Structural barriers include the lack of primary care providers, medical specialists, or other health care professionals to meet special needs or the lack of health care facilities. Personal barriers include cultural or spiritual differences, language barriers, not knowing what to

PERFORMANCE MEASURE:

Percentage of 3rd grade children with untreated caries

STATUS:

GOAL

To prevent or alleviate suffering due to dental pain or infection by assuring prevention and early intervention in the dental disease process.

DEFINITION

Percent of third grade children in public schools who have untreated caries (based on weighted sample data)

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

21-1b

Reduce the proportion of children with dental caries experience in their primary and permanent teeth to 42%.

DATA SOURCES AND DATA ISSUES

The Bureau of Oral Health Services conducts periodic statewide open-mouth examination surveys. A cadre of sentinel schools is then selected for annual screenings to serve as an indicator of oral health status. A county-level stratified cluster sample survey of third grade children in 370 Ohio public schools were selected using probability proportional-to-size methodology. The county-level data were aggregated for state estimates.

SIGNIFICANCE

Dental disease is common and amenable to early intervention. High risk children can be targeted for extensive preventive strategies. Early dental disease can be reversed and more advanced disease can be treated before it results in pain, infection and the need for more expensive approaches. This measure indicates the extent to which children are receiving dental care.

SP # 8

PERFORMANCE MEASURE:

Implement Ohio Connections for Children with Special Needs (OCCSN) Birth Defects Registry System

STATUS:

Active

GOAL

To reduce the risk of birth defects in Ohio through a combined program of prevention, surveillance and referral to services.

DEFINITION

The percentage of performance benchmarks Ohio has reached toward implementing the OCCSN Program. Benchmarks: 1. Implement a birth defects data collection and referral to services pilot project. 2. DATA SOURCES AND DATA ISSUES

Surveillance: vital statistics records; link with DFCHS program data and ODH laboratory data; Medicaid; Prevention; Ohio PRAMS data for folic acid knowledge and use of alcohol and tobacco; Referral to Services: OCCSN Program data, BCMH data, Help Me Grow data.

SIGNIFICANCE

Birth defects are the leading cause of infant mortality in the United States, accounting for more than 20% of all infant deaths. In addition, birth defects are the fifth-leading cause of years of potential life lost and contribute substantially to childhood morbidity and long-term disability. Developing the infrastructure for the collection of information on cases of birth defects will provide the mechanisms for prevention strategies; healthcare and human services referrals; public health education/social messages; and epidemiological and clinical research.

PERFORMANCE MEASURE:

Increase the proportion of children who receive age-and risk-appropriate screenings for lead, vision, and hearing.

STATUS:

Active

GOAL

To identify unrecognized health disorders in order to prevent or ameliorate consequent disability or handicap.

DEFINITION

The number of performance measure bench marks Ohio has reached towards increasing statewide capacity to increase the proportion of children who receive age-and risk-appropriate screenings for lead, vision and hearing. Benchmarks: 1. Define age of population to measure. 2. Define what constitutes a "screening" for age group defined. 3. (Developmental) Reduce noise-induced hearing loss in children and adolescents aged 17 years and under.

DATA SOURCES AND DATA ISSUES

Source for lead data is the Ohio Childhood Lead Poisoning Prevention STELLAR Database. Source for vision screening data is to be determined as a first year strategy of this measure. While data sources are available, Ohio will streamline the data collection process by evaluating options and determining the best data sources, and measures, for achieving success. Source for hearing screening data is to be determined as a first year strategy of this measure. While data sources are available, Ohio will streamline the data collection process by evaluating options and determining the best data sources, and measures, for achieving success.

SIGNIFICANCE

Lead poisoning is one of the most common and preventable childhood environmental health problems in the U.S. Low-income children, especially those living in the inner city, are at an increased risk for lead poisoning. Ages one and two years are the recommended targeted times for testing at-risk children for lead exposure, but testing rates are lower than expected. Vision disorders are the fourth most common disability in the United States. One in four school aged children has vision problems. The two primary pathways for learning are vision and hearing. Only an estimated 14 percent of children receive comprehensive vision examinations before entering school and almost half of all children under the age of 12 have never been seen by an eye care professional. Hearing loss affects language, speech, cognitive development and educational progress as well as self-image and social/emotional development. Even mild hearing loss has substantial detrimental consequences. Periodic screening is essential to identify hearing loss.

DATA SOURCES AND DATA ISSUES

Vital Statistics

SIGNIFICANCE

There were 14,663 deaths in 1996 among adolescents aged 15-19 years, for a death rate of 78.6 per 100,000. The leading cause of death for adolescents in this age group was motor vehicle crashes at 28.55 deaths per 100,000, or 36.3 percent of total deaths. Other unintentional injuries (such as falls, drownings, and poisonings) caused 7.64 deaths per 100,000 (9.7 percent); homicides caused 15.66 deaths per 100,000 (19.9 percent); suicides caused 9.73 deaths per 100,000 (12.4 percent); and AIDS caused 0.26 deaths per 100,000 (0.3 percent). Consequently, a majority (78 percent) of the total mortality in this age group can be attributed to unnecessary (that is, preventable) causes. The remaining 22 percent of deaths among adolescents aged 15 to 19 years resulted mostly from malignant neoplasms which caused 3.67 deaths per 100,000 (4.7 percent); diseases of the heart caused 2.18 deaths per 100,000 (2.8 percent); birth defects caused 1.02 deaths per 100,000 (1.3 percent); and a combination of other causes caused 8.42 deaths per 100,000 (10.7 percent).

8. **Section Number:** Indicator 05
Field Name: InfantDeath
Row Name: Infant deaths per 1,000 live births
Column Name:
Year: 2009
Field Note:
Data field was updated to 2004. No data beyond 2004 for this indicator are available because the matched Medicaid/birth certificate file is not available to link with the infant birth/death file. ODH has begun generating the data for this indicator instead of Medicaid. The data presented is based on adjusted infant mortality rates, which assign the unmatched infant death certificates to Medicaid and non-Medicaid deaths on the basis of each group's proportion of matched live births.

1. **Section Number:** Indicator 09A
Field Name: BAW
Row Name: Annual linkage of birth certificates and WIC eligibility files
Column Name:
Year: 2009
Field Note:
WIC and birth certificate records are linked on an as-needed basis, not necessarily annually.
2. **Section Number:** Indicator 09A
Field Name: BAN
Row Name: Annual linkage of birth certificates and newborn screening files
Column Name:
Year: 2009
Field Note:
ODH does not currently link birth certificates and newborn screening files. ODH has implemented the Integrated Public Health Information System (IPHIS). Phase One involved the collection of Vital Statistics data. This integrated system is expediting the extraction of needed Vital Statistics data and it is also beginning to be used for the collection of other data. Discussions about collecting newborn screening data on the birth certificate are expected to be raised again at some future date.
3. **Section Number:** Indicator 09A
Field Name: Discharge
Row Name: Hospital discharge survey for at least 90% of in-State discharges
Column Name:
Year: 2009
Field Note:
The MCH program has access to subsets of the Ohio Hospital Association database per a Memorandum of Understanding between the Ohio Department of Health and the Ohio Hospital Association.
4. **Section Number:** Indicator 09A
Field Name: BirthDefects
Row Name: Annual birth defects surveillance system
Column Name:
Year: 2009
Field Note:
The development of Ohio's Birth Defects Surveillance System is in progress. Pilot data collection from several hospitals was completed in 2007. Data collection was expanded statewide in July 2007. Data analysis will begin when sufficient data are available.
5. **Section Number:** Indicator 09B
